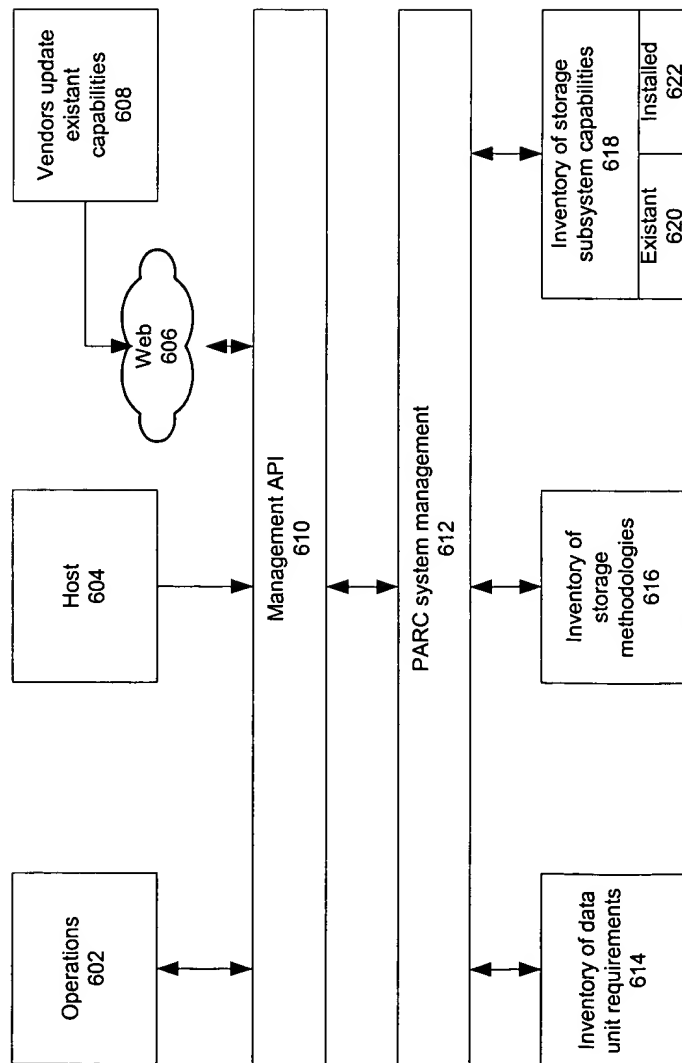

FIG. 7 is a block diagram of a system architecture for a data storage system. The system includes a VTT (Virtual Tape Transport) layer, a TNT (Tape Network Transport) layer, and a Back-end storage layer. The VTT layer consists of VTT Page 0 and VTT Page 1. VTT Page 0 contains eight Track Number entries, and VTT Page 1 contains eight Track Number entries. The TNT layer consists of TNT Page 0, TNT Page 1, and TNT Page 2. TNT Page 0 contains five Log Addr entries, TNT Page 1 contains five Log Addr entries, and TNT Page 2 contains five Log Addr entries. The Back-end storage layer consists of a single large block. Arrows indicate the flow of data from the VTT layer to the TNT layer and from the TNT layer to the Back-end storage layer. Specifically, each Track Number in VTT Page 0 is mapped to a Log Addr in TNT Page 0. Each Track Number in VTT Page 1 is mapped to a Log Addr in TNT Page 1. Each Log Addr in TNT Page 0 is mapped to a corresponding entry in the Back-end storage layer. Each Log Addr in TNT Page 1 is mapped to a corresponding entry in the Back-end storage layer. Each Log Addr in TNT Page 2 is mapped to a corresponding entry in the Back-end storage layer.
